SHLOKA

पंचकर्म परिचय

निरुक्ती :-

1. यदीरयेत् बहीः दोषान् पंचधा शोधनं च तत् ।
निरुहो वमनं कायशिरोरेकोऽस्रविस्रूति ॥ (अ. ह. सू.14/5)

शोधन महत्व :-

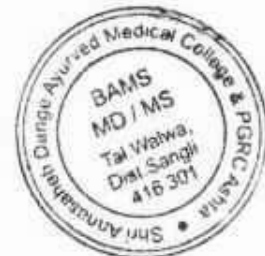

2. दोषाः कदाचित् कुप्यन्ति जिता लंघनपाचनैः ।
जिताः संशोधनैः ये तु न तेषां पुनरुद्भवः ॥ (च. सू.16/20)

शोधन फल :-

3. मलापहं रोगहरं बलवर्णप्रसादनम् ।
पीत्वा संशोधनं सम्यगायुषा युज्यते चिरम् ॥ (च. सू.15/22)
4. एवं विशुद्धकोष्ठस्य कायाग्निः अभिवर्धते ।
व्याधयश्च उपशाम्यन्ति प्रकृतिः च अनुवर्तते ॥
इंद्रियाणि मनोबुद्धिः वर्णं च आस्य प्रसीदति ।
बलं पुष्टीः अपत्यं च वृषता चास्य जायते ॥
जरां कृच्छ्रेण लभते चिरं जीवत्यनामयः ।
तस्मात् संशोधनं काले युक्तियुक्तं पिबेत् नरः ॥ (च. सू.16/17-19)

शोधन योग्य /बहुदोष लिङ्ग :-

5. अविपाकोऽरुचिः स्थूल्यं पाण्डुता गौरवं क्लमः ।
पिडकाकोठकण्डुणां संभवोऽरतिरेव च ॥
आलस्यश्रमदौर्बल्यं दौर्गन्ध्यमवसादकः ।
श्लेष्मपित्तसमुत्क्लेशो निद्रानाशोऽतिनिद्रता ॥
तन्द्रा क्लैब्यम् अबुद्बुधित्वम् अशस्तस्वप्नदर्शनम् ।

बलवर्णप्रणाशश्च तृप्यतो बृंहणैरपि ॥
बहुदोषस्य लिङानि तस्मै संशोधनं हितम् ।
उर्ध्वं च एव अनुलोमं च यथादोषं यथाबलम् ॥ (च. सू. 16/13-16)

अष्ट महादोषकर भाव :-

6. उच्चैर्भाष्यं रथक्षोभम् अतिचङ्क्रमण आसने ।
अजीर्णं अहितभोज्ये च दिवास्वप्नं समैधुनम् ॥ (च. सि. 12/11)

स्नेहन कर्म

निरुक्ती :-

1. स्नेहनं स्नेह विष्यंद मार्दवं क्लेदकारकम् ॥ (च. सू. 22/11)

सम्यक् स्निग्ध लक्षण :-

2. वातानुलोम्यं दीप्तोऽग्निः वर्चः स्निग्धम् असंहतम् ।
मार्दवं स्निग्धतां चांगे स्निग्धानाम् उपजायते ॥ (च.सू.13/58)

असम्यक् स्निग्ध लक्षण :-

3. पुरीषं ग्रथितं रूक्षं वायूरप्रगुनो मृदुः।
पक्ता खरत्वं रौक्ष्यं च गात्रस्य अस्निग्ध लक्षणम् ॥ (च.सू.13/57)

अतिस्निग्ध लक्षण :-

4. पाण्डुता गौरवं जाड्य पुरीषस्य अविपक्वता ।
तन्द्रिः अरुचिः उत्क्लेशः स्यात् अतिस्निग्ध लक्षणम् ॥ (च.सू.13/ 59)

पंचकर्म पुर्व स्न्येहन महत्व :-

5. स्नेहोऽनिलं हन्ति मृदूकरोति देहं मलानां विनिहन्ति सङ्गम् ॥ (च.सि.1/7)

स्वेदन कर्म

निरूक्ती :-

1. स्तंभ गौरव शीतघ्नं स्वेदनं स्वेदकारकम् ॥ (च. सू.22/11)

सम्यक् स्विन्न लक्षण :-

2. शीतशूलव्युपरमे स्तम्भगौरवनिग्रहे ।
संजाते मार्दवे स्वेदे स्वेदनात् विरतिर्मता ॥ (च.सू.14/13)

अस्विन्न लक्षण :-

3. स्वेदसावो व्याधिहानिः लघुत्वं शीतार्थित्वं मार्दवं च आतुरस्य ।
सम्यक् स्विन्ने लक्षणं प्राहरेत् मिथ्यास्विन्ने व्यत्यय एन एतदेव ॥ (सु.चि.32/23)

अतिस्विन्न लक्षण :-

4. पित्तप्रकोपो मूर्च्छा च शरीरसदनं तृषा ।
दाहः स्वराङ्गदौर्बल्यम् अतिस्विन्नस्य लक्षणम् ॥ (च.सू.14/14)

पंचकर्म पूर्व स्वेदन महत्व :-

5. स्निग्धस्य सूक्ष्मेषू अयनेषू लीनं स्वेदस्तु दोषं नयति द्रवत्वम् ॥ (च. सि.1/7)
- ### स्वेदन भेद :-

6. संकरः प्रस्तरो नाडी परिषेकोऽवगाहनम् ।
जेन्ताकोऽश्मघ्नः कर्षूः कुटी भूः कुंभीकैव च ॥
कूपो होलाक इत्येते स्वेदयन्ति त्रयोदश ॥ (च.सू.14/19)

वमन कर्म

निरुक्ती :-

1. अपकव पित्तश्लेष्माणं बलात् उर्ध्वं नयेत् तु यत् ।
वमनं तद्धि विज्ञेयं मदनस्य फलं यथा ॥ (शा.प्र.ख. 4)

गुण व प्रभाव :-

2. तत्र उष्ण – तीक्ष्ण- सूक्ष्म – व्यवायि – विकाशीन्यौषधानी स्ववीर्येण
हृदयमुपेत्य धमनीरनुसृत्य स्थुलाणूस्त्रोतोभ्यः केवलं शरीरागतं

DEPARTMENT OF PANCHAKARMA

BATCH 2022-23 (95) – Ist TERM JUNE 2023 - SLOW LEARNER ANALYSIS

Students, who are Slow Learners, were instructed to perform procedures like Abhyanga, Padabhyanga, Shirodhara, Shiropichu, Netra Tarpan on 10 patients each along with Recitation of Shlokas. Performing procedures gave them insight towards how procedures work and they also came to know importance of Shodhana. Recitation of Shlokas boosted their confidence and gave them better understanding of subject.

Grading criterion:

- Grade I: 4 out of 5 procedures performed and above 20 Shlokas recited
Grade II: 3 out of 5 procedures performed and above 15 Shlokas recited
Grade III: 2 out of 5 procedures performed and above 10 Shlokas recited

BATCH 2022-23 (95) – IInd TERM OCTOBER 2023 - SLOW LEARNER ACTIVITIES GIVEN

The Students who are Slow learners in IInd term theory, we have given practical approach through procedure like Basti Dravya Preparation, Administration of Basti, Nasya, Siravyadhana, Jaloukavacharana etc. and also given 25 Shloka recitation. Extra lectures were taken to enhance their knowledge about subject.

DEPARTMENT OF PANCHAKARMA

BATCH 2022-23 (95) – IInd TERM OCTOBER 2023 - SLOW LEARNER ANALYSIS

Students, who are Slow Learners, were instructed to perform procedures like Basti Dravya, Administration of Basti, Nasya, Siravyadhana, Jaloukavacharana on 10 patients each along with Recitation of Shlokas. Performing procedures gave them insight towards how procedures work and they also came to know importance of Shodhana. Recitation of Shlokas boosted their confidence and gave them better understanding of subject.

Grading criterion:

- Grade I: 4 out of 5 procedures performed and above 20 Shlokas recited
Grade II: 3 out of 5 procedures performed and above 15 Shlokas recited
Grade III: 2 out of 5 procedures performed and above 10 Shlokas recited

TITLE RESEARCH OF PROJECT

Open randomised clinical trial of Ardhavbhedakhar lepa in Ardhavbhedak with special reference to migrane.

INTRODUCTION:

- Aim of Ayurved

“स्वस्थस्यस्वास्थ्यरक्षण |

आतुरस्यविकारप्रशमनम् ॥”

Ayurveda is an ancient science of India . Main aim is to maintain health of healthy person & cure the disease in the diseased .Ayurveda gives further importance to the causative factors of the disease as it eliminates disease from the root cause.

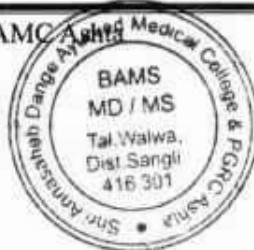

Now a days lifestyle of people drastically changed Over eating of junk food ,late night work, lack of exercise ,lack of sleep ,alcohol cigarettesmoking, sedentary life style, ,increased screen time are some of the main cause of lifestyle disorder. This unhealthy lifestyle causes Ardhabhedak.

According to aacharayacharak, Ardhabhedak Vatakaphaj disorder. It causes Manya(cervical region) &Karna akshilalat (frontal region),Shankhak (Temporal region)of one side of head. Migraine can be correlated with Ardhabhedak.in Ayurveda It is a benign and recurringsyndrome of headache associated with other symptoms of neurological dysfunction like sensitivity to light, sound or Movement etc.

Acc to WHO ,migraine the is the third most common disease in the world . Its global prevalance rate is 14.7% . It is more common in females than males its ratio is about 3:1 in world where as in india this ratio is about 2:1.

There are various treatment described in Ayurveda for Ardhabhedak like shaman (aushadhi) chikitsa. & Lepchikitsa, Nasyaetc.

This Ardhabhedakharlep contains TilJatamansi,Saindhav and honey etc.This drugs have properties like SnigdhaUshna, Tikihna&Vedanashamakeffect It will acts as vatkaphaghna

Hence helps to the cure the disease. Lepkalpana is one of them variety of lepa are given in the samhita for various diseases. Ardhavbhedakharlep is stated in Bhaishajyaratnavali.

Need of study

- The lepa is a bahiparimarganachikitsa. It is even beneficial for all.
- Now a days lifestyle of people is drastically changed due to over eating junk food, lack of exercise, increased screen time, lack of sleep .This unhealthy lifestyle causes Ardhavbhedak which disturbs daily routine.
- Hence to increase mental status, Systemic circulation, and daily lifelechikitsa is effective one.
- Content of ardhavbhedaklep are easily available, cost effective and easy for application.

RESEARCH QUESTION

Is the ardhavbhedakharlep is effective in reliving pain and episodes of shiroshool in ardhavbhedak ?

HYPOTHESIS

H0 : The ardhavbhedakharlep is not effective in ardhavbhedak

HI : The ardhavbhedakharlep is effective in ardhavbheda

AIM

To evaluate the efficacy of ardhavbhedakharlepa in ardhavbheda.

OBJECTIVE

1. To reveiwardhavbhedakha in details.
2. To reveiw migraine in details.
3. To reveiwardhavbhedakharlepa in details.
4. To reveiwlepakalpana in details.
5. To observe adverse drugs reaction of Ardhavabhedkaharlepa in ardhavbheda

REVIEW OF LITERATURE

1] Review Of Disease

• DEFINATION OF ARDHAVBHEDAK

Ardhavybhedakhar is a TridoshajaShirorogacharacterized by recurrent attacks of Headache, widely variable in intensity, frequency and duration. Attacks are commonly unilateral and usually associated with bhrama, aruchi, moha, prakasha&Sabdaasahatwa.

MIGRAIN

Defination:

Migraine is a benign and recurring syndrome of headache associated with other symptoms of neurological dysfunction such as sensitivity to light, sound, or Movement , nausea, vomiting etc.

Types:

1)Common Migraine

2)Classical Migraine

1)Common Migraine:

It is characterised by moderate to severe usually unilateral, pulsating Type of headache lasting for 4-72 hr which may be aggravated by routine, physical activities. It may be associated with

1)Nausea

2)Vomiting

3)Photophobia

4)Phonophobia

But there are no Classical local neurological events.

The exact mechanism is not known, but changes in blood composition and platelet function due to various External and internal causes plays a triggering role.

The pathophysiological process, which starts inside the brain. Interact with the intracranial and extracranial vasculature through trigemino-vascular system.

Menstrual Migraine:

Which starts any time between 2days before the expected date and before the last day of Menstrual.

2)Classical Migraine/Migraine with aura

It is a triad of-

1. paroxysmal headache

2. Vomiting

3. focal neurological events

The aura usually consist of

1. homonymous visual disturbances

2. Hemisensory symptoms

3. Hemiparesis

4. Dysphasia

Or any combination of these symptoms.

The visual aura starts as a fortification spectrum

e.g. shimmering, silvery zig-zag lines or star shaped figure is seen which spreads across the visual or relative scotoma.

It develops for 5-20min and lasts for less than 60 min.

Headache, nausea and photophobia usually follow the aura. Headache lasts for 4-72hr.

The regional Cerebral blood flow in the corresponding affected area is decreased before or at the time of aura but become hyperaemic After one to many hours. The Headache starts with ischaemia but subsides during hyperaemia Management:

- Avoid the triggering factors.
- stabilise the neurovascular reaction.

3) Block the mediators.

4) Protect the end organs.

5) Use of analgesics in the last.

- Ergotamine tartarate: 0.5-1 mg/day.
- Sumatriptane in severe attacks.
- Propranolol 80-160 mg/daily : used as prophylaxis in recurrent attacks.

2] REVIEW OF DRUGS

सु.सु.१८/१६

Pralepa: Sheet , Tanu , vishoshi

Lepa prepared from plants having Sheeta veerya (cold potency).

This type of lepa is applied in increased pitta dosha to reduce it.

Pradeha: Ushna , Avishoshi

Lepa prepared from plants having Ushna veerya (hot potency).

This type of lepa is usually applied in increased kaphajadosha condition to reduce it.

Alepa:

-Not Ushna/sheeta

-Vednashamak (su.sutra 16/6)

-tridosharpaki, shighrapaki (su.sutr 17/15).

Quantity of sneha in lep:

According to sushrat.

Vatvyadhi: 1/4th of kalk

Pitavyadhi: 1/6th of kalka

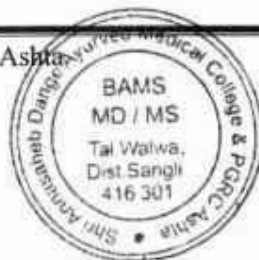

Kaphajvyadhi: 1/8th of kalka

Rules of lepa application:

- Freshly prepared lepa should be used everytime.
- Lepa should not be applied during night time.(su.sutra18/12).
- Overlapping of lepavoided .
- Lepa should be applied against hair follicles direction to facilitate perfect absorption of lepa ingredients (su .sutra18/14).
- As it's dried remove instantly.

Pralepa: Sheet , Tanu , vishoshi

- Lepa prepared from plants having Sheetaaveerya (cold potency).
- This type of lepa is applied in increased pitta dosha to reduce it.

MATERIAL AND METHODOLOGY

1. Material-

Literature Source-

- Charaksamhita,
- Sushrutsamhita
- Madhavnidan ,
- Bhaishajyaratnavali,
- Sharangdharsamhita

<https://jaims.in/jaims/article/view/1713>

-Drug source : Ardhavbhedkharlep (bhaishajyaratnavali)
Sample source : OPD of panchkarma in Dhanwantari Hospital
Sample size : 10

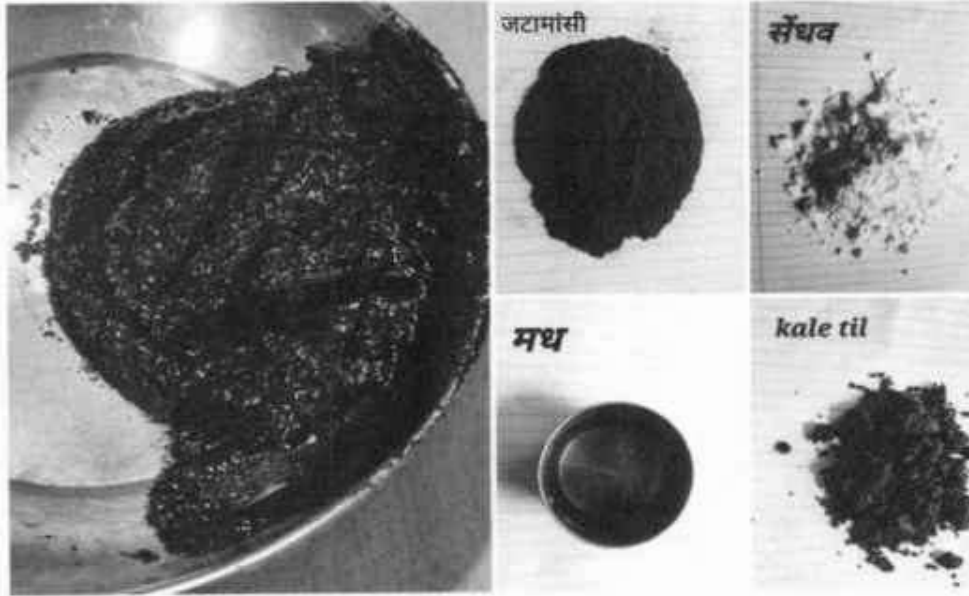

2. Methodology-

Type of study : Single arm clinical study.
Study design : Randomised single armed study

DRUG PREPARATION

Name of Drug	Quantity of Drug
Jatamansi	2 gm
Til kalka	2 gm
Madhu	As per need
Saindhav	1 gm

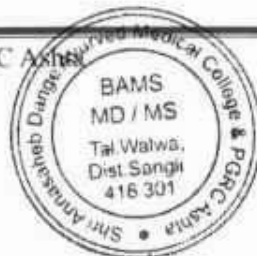

1 Procedure

- **Purvakarma**

1. First the patient should be asked to pass stool or urine. Then ask the patient to sit or lie down on chair or bed.
2. Then Mix the Aushadhidravya (Jatamaunsi, tilkalka, sendhav) of Ardavabhedkaharlepa and mix it with honey as required to prepare lepa.
3. After that, the area where the lepa is to be applied should be cleaned with water.

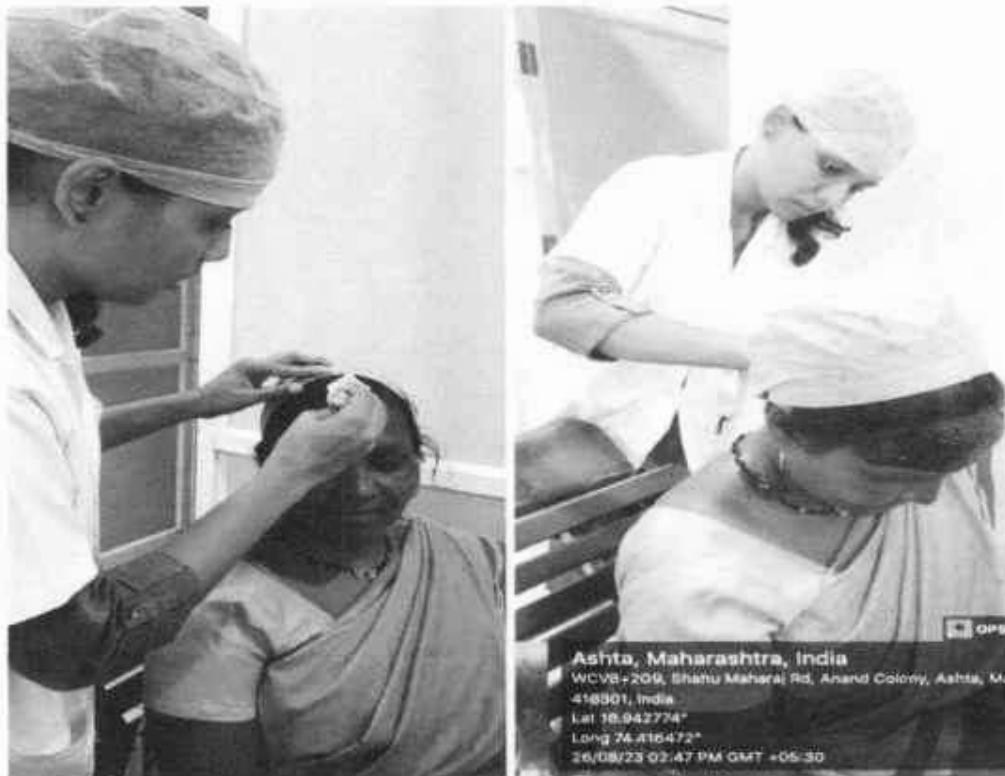

- **Pradhankarma** According to the ardhavbhedakvyadhi, the doctor should carefully apply lepa to the diseased area [lalatpradesh].

The lepa should be kept for at least 40-45 min.

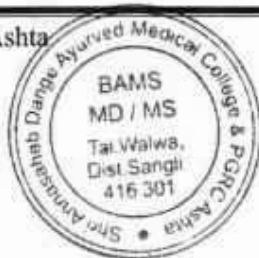

- **Paschatkarma**

1. After 40 to 45 min the applied lepa should be wiped out with a cotton cloth.
2. After that wash the face with warm water.

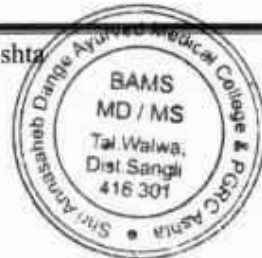

- **Data Collection Tools**

Inclusion criteria	Exclusion criteria	Withdraw criteria
<ul style="list-style-type: none"> • Age group 20-60 • Sex- both • Patient diagnosed Ardhavbhedhak which is mentioned in charaksamhita • Fit for lepa 	<ul style="list-style-type: none"> • Below 20yr and above 60yr • Drug abuse • Unfit for lepa 	<ul style="list-style-type: none"> • Those who does not follow pathya • ADR

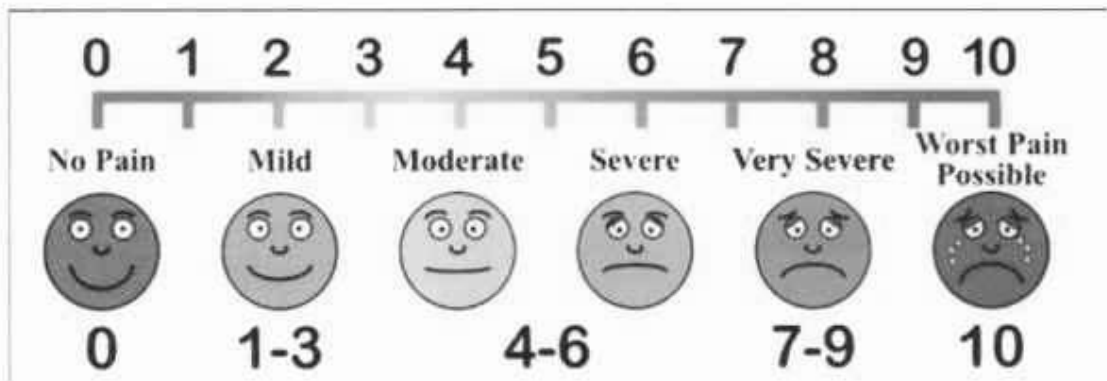

TREATMENT PLAN

Procedure	Lepa Kalpana
Sample Size	10
Drug	Ardhavybhedkakarlepa
Mode of Application	External application
Time	4pm to 6 pm[vataghna kala]
Duration	40 to 45 minutes
Days	7 days
Follow up	8 th day
Pathya	Do yoga, Pranayam, Healthy Diet, Good sleep habit
Apathya	Spicy food , Ratri jagaran, Stress

- **ASSESSMENT CRITERIA**

- **PARAMETERS**
VAS SCALE

0 : NO PAIN

2. Twice in a week
3. Thrice in a week

Duration –

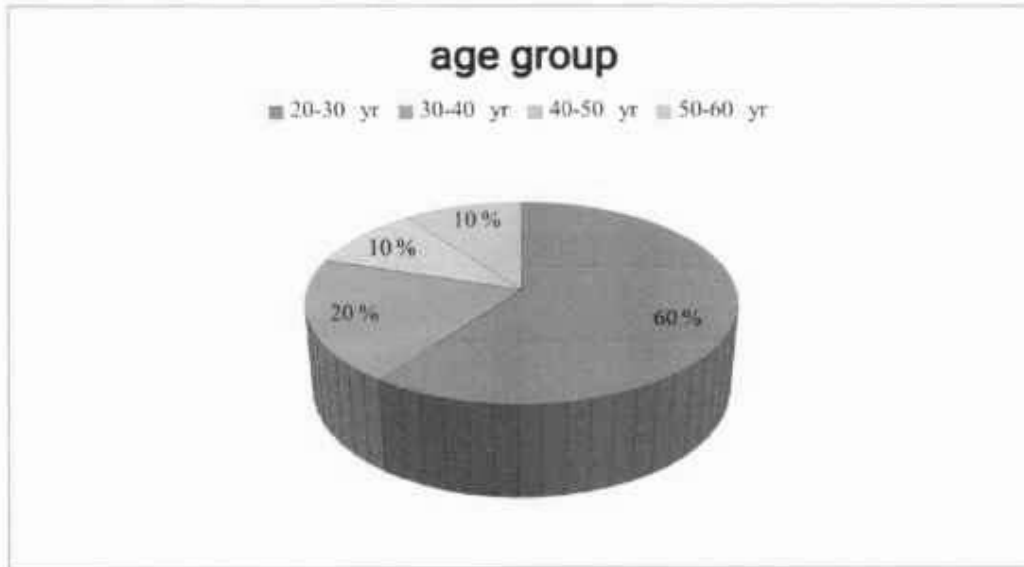

1. 4 hours/episode
2. 6 hours/episode
3. 8 hours/episode
4. 12 hours/episode

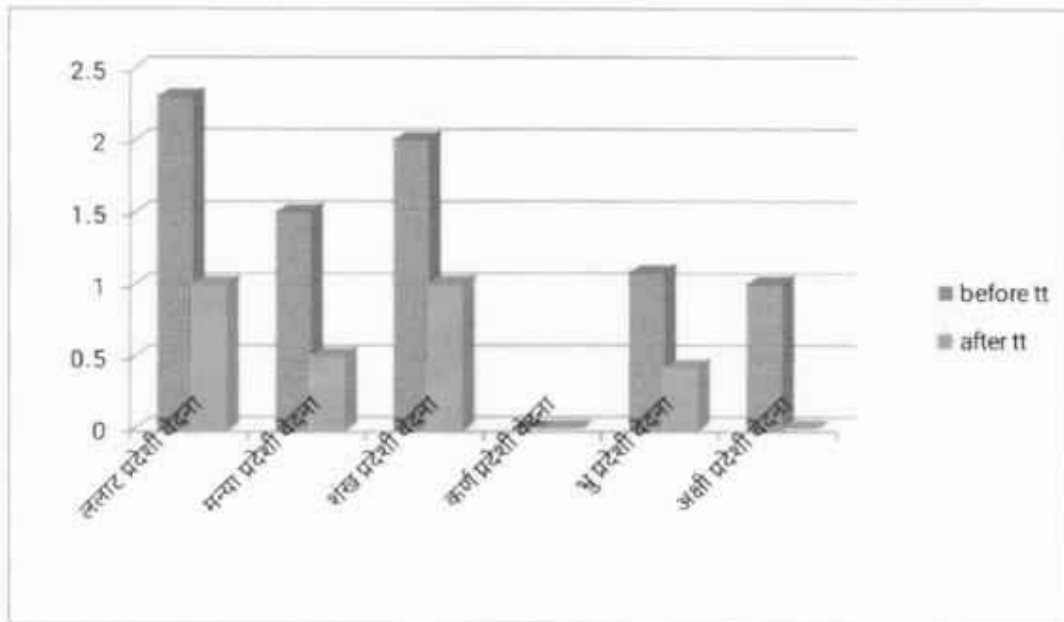

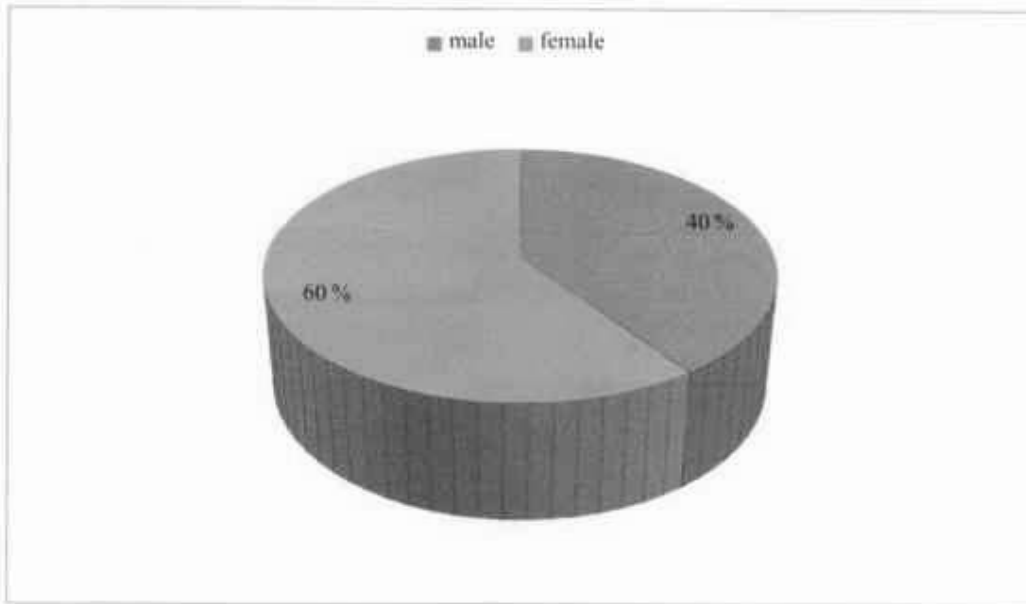

Effect on daily routines –

1. Not hampered
2. Mildly hampered
3. Daily routine hampered to large extent
4. Not able to perform daily routine

OBSERVATION

Complaints	No. of patients	Before treatment	After treatment
ललाटप्रदेशीवेदना	10	2.3	1
मन्याप्रदेशीवेदना	6	1.5	0.5
शंखप्रदेशीवेदना	7	2	1
कर्णप्रदेशीवेदना	-	-	-
भ्रुप्रदेशीवेदना	7	1.08	0.42
अक्षीप्रदेशीवेदना	1	1	0

RESULT

- According to our study which was based on Ardhavbhedak in age group 20 to 60 years.
- Out of 11 patients [7 Female , 4 Male] 10 Patients got significant relief.
- Overall all patients got significant improvement in Lalat,Manya,Shankhpradeshi Vedana and comparatively less improvement in Bhru and Akshi pradeshi Vedana
- Among 11 Patient, 1 Patient was withdrawn from the study due to ADR.[Rash and Itching]

DISCUSSION

- **Modern View of Ardhavbhedakhar Lepa:**

In Modern medical science when lep is applied over the skin Surface it'sabsorption take place in further way.Firstlyit is absorbed through Trans epidermal layer of skin then through Stratum corneum then epidermal layer and lastly through dermis. This Absorption takes place in Two ways; 1] Systemic circulation

2]Capillary vessels

Due to action of ardhavbhedakharlepavasodilation occursandextracranial vessels dilated so blood flow is Increased.Therefore, pain in migraine is reduced.

Lepa applied over skin Surface

Trans epidermal

Stratum corneum

Epidermal layers

Enter dermis

Absorption

Systemic circulation

capillary vessels

Acts on constricted extracranial vessel

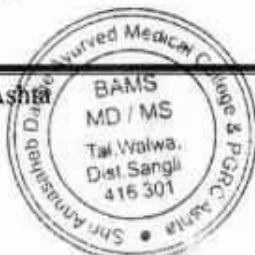

Vasodilation

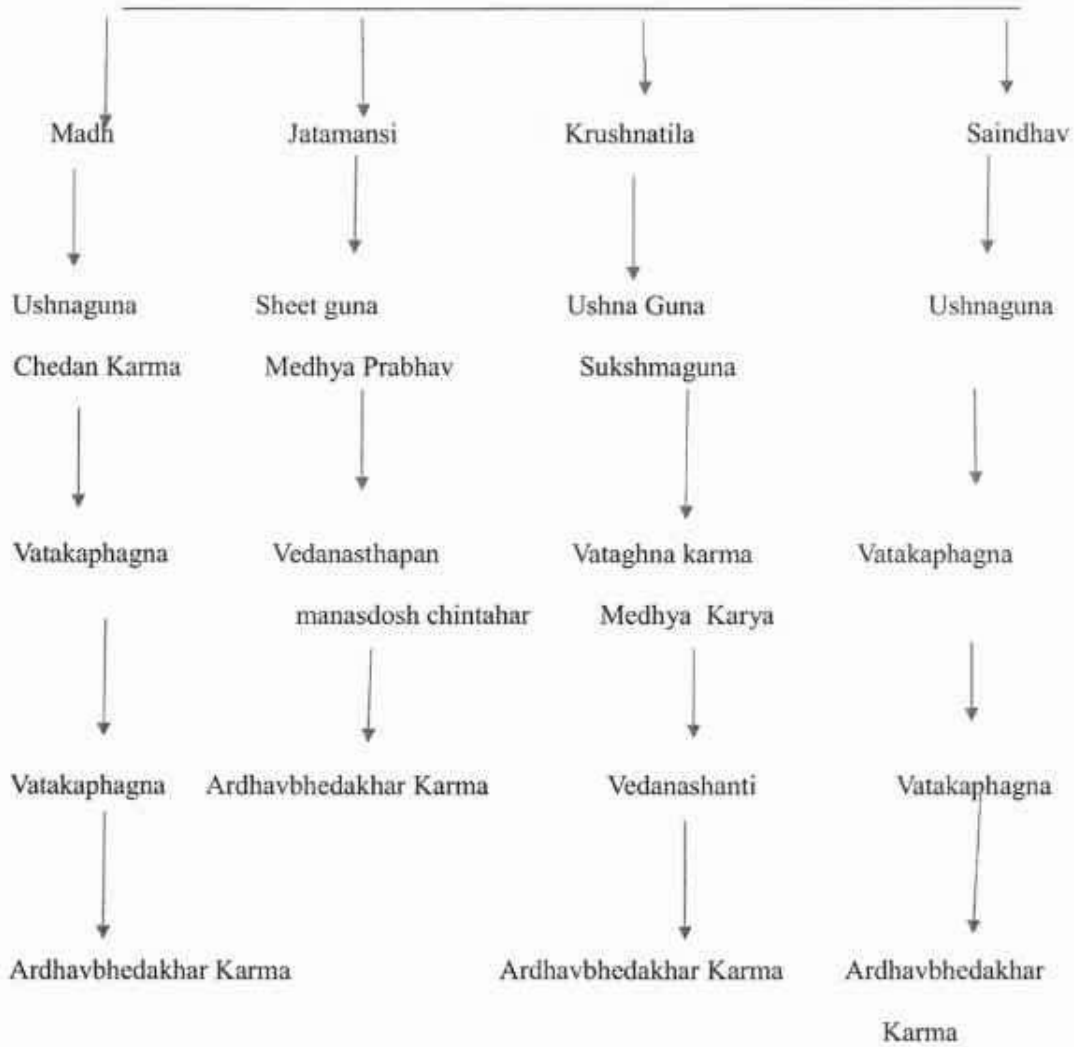

Increased blood flow

Reduced pain inmigrane And long use reduces the recurrence of Migraine attacks.

MODE OF ACTION OF LEPA DRAVYA
ARDHAVBHEDAKHAR LEPA

Out of 10 patients one of them did Apathya. Due to this on 4th day she started complaining of rash and mild itching on forehead. Hence, We have given her sutshekharas and kamdudhavati for 3 days as treatment.

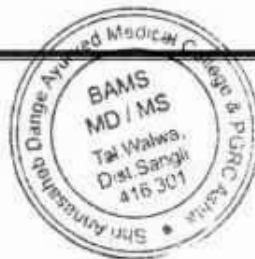

CONCLUSION

The ardhavbhedakarlep is effective in reliving pain and episodes of shiroshool in ardhavbhedak.

Address. Ashta

डॉक्टरांनी मला/आम्हाला वारंवार होणाऱ्या अर्धावभेदक व्याधी साठी
अर्धावभेदकहर लेपची सर्व माहिती दिली असून या उपक्रमा मध्ये मी स्वइच्छेने सामील होत
आहे .

डॉक्टरांनी मला हा लेप का लावत आहे, लेपातील घटक द्रव्ये तसेच लेपाचे
परिणाम व दुष्परिणाम इत्यादीची संपूर्ण माहिती दिली आहे.

तरी मी डॉक्टरांना लेप लावण्याची परवानगी देत आहे व लेपाचे काही दुष्परिणाम
झाल्यास त्याची मला संपूर्ण जाहिती असून त्यास मी जबाबदार असेन.

वरील सर्व कलमे / माहिती मी वाचली असून ती मला समजली असून मान्य
आहे.

डॉक्टरांनी मला/आम्हाला वारंवार होणाऱ्या अर्धावभेदक व्याधी साठी .
अर्धावभेदकहर लेपची सर्व माहिती दिली असून या उपक्रमा मध्ये मी स्वइच्छेने सामील होत
आहे .

डॉक्टरांनी मला हा लेप का लावत आहे, लेपातील घटक द्रव्ये तसेच लेपाचे
परिणाम व दुष्परिणाम इत्यादीची संपूर्ण माहिती दिली आहे.

तरी मी डॉक्टरांना लेप लावण्याची परवानगी देत आहे व लेपाचे काही दुष्परिणाम
झाल्यास त्याची मला संपूर्ण माहिती असून त्यास मी जबाबदार असेन.

वरील सर्व कलमे / माहिती मी वाचली असून ती मला समजली असून मान्य
आहे.

डॉक्टरांनी मला/आम्हाला वारंवार होणाऱ्या अर्धावभेदक व्याधी साठी अर्धावभेदकहर लेपची सर्व माहिती दिली असून या उपक्रमा मध्ये मी स्वइच्छेने सामील होत आहे .

डॉक्टरांनी मला हा लेप का लावत आहे, लेपातील घटक द्रव्ये तसेच लेपाचे परिणाम व दुष्परिणाम इत्यादीची संपूर्ण माहिती दिली आहे.

तरी मी डॉक्टरांना लेप लावण्याची परवानगी देत आहे व लेपाचे काही दुष्परिणाम झाल्यास त्याची मला संपूर्ण माहिती असून त्यास मी जबाबदार असेन.

वरील सर्व कलमे / माहिती मी वाचली असून ती मला समजली असून मान्य आहे.

"HYDROCEPHALUS"

Preeti Ramesh Kumbhar

Bams III rd Year

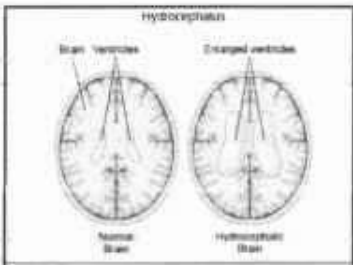

Roll No 45

"HYDROCEPHALUS"

Definition-
 "It is the increased amount of CSF in ventricular system due to impaired circulation, absorption or rarely excessive production."

The term hydrocephalus literally meaning 'water logging of the head' refers to the enlargement of head as a result of abnormally high accumulation of CSF in the ventricular system.

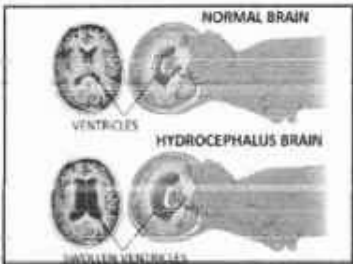

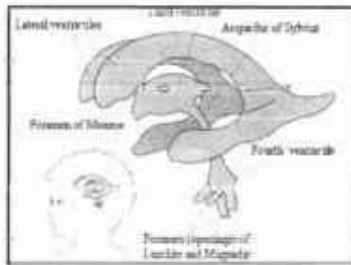

Types

Pathophysiological types-

- 1) Non obstructive / communicating hydrocephalus.
- 2) Obstructive / Non communicating hydrocephalus.

Pathological types-

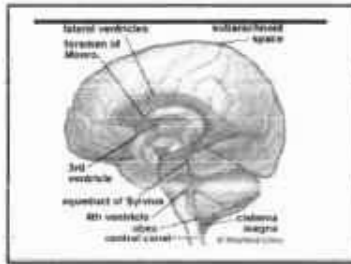

- 1) Congenital
- 2) Acquired

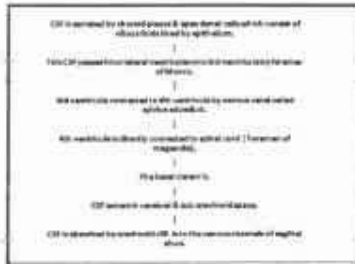

PHYSIOLOGY:-

The CSF is formed primarily in the ventricular system by the choroid plexus, which is situated in the lateral, 3rd, 4th ventricles.

The total volume of CSF approximates 50 ml in an infant & 150ml in an adult. Most of the CSF is intraventricular.

Causes:-

1] Congenital Hydrocephalus.

1. Intrauterine Infection - Rubella.
2. Cytomegalovirus toxoplasmosis.
3. Intracranial bleeds intraventricular haemorrhage.
4. Congenital malformation - Aqueduct stenosis.
5. Dandy walker syndrome.

2] Acquired Hydrocephalus:-

1. Tuberculosis
2. Christi & Pyogenic meningitis
3. Intracranial haemorrhage.
4. Prostatic fossa tumors.
5. Choroid plexus papilloma.
6. Infection - Meningitis, Mumps

Signs & Symptoms in infants [Acute/Rapidly Progressive]

1. Distension of fontanelles over scalp.
2. Head stiffness.
3. Poor feeding.
4. Irritability.
5. Bulging anterior fontanel.
6. Vomiting.
7. Papillary oedema.
9. sun set sign - when child lies on its back.
9. High rising font fign - skull fontanelles protrude - More visible
10. Myoclonic signs - convulsions occur on paroxysms due to widely spread anoxia.

Signs & Symptoms in children. [Chronic / slowly progressive]

1. Gradual slowing of mental growth.
2. Behavioural & school performance.
3. Mental retardation.
4. Drowsiness.
5. Neck pain.
6. Irritability.
7. Abnormal vision.
8. Headache.
9. Difficulty in walking.

Examination in infants

1. Examination of the infant may reveal the following findings:

- Head enlargement.
- Occipital prominence.
- Dilated scalp veins.
- Tense fontanelles.
- Sunset sign - observed in occipital region. This is formed because of acute & progressive pressure upon the wide area of the occipital fontanel.
- Increased fontanelle tension - particularly across the skull sutures.

Investigations:-

1. Skull radiographs.
2. Isotope scans (PET) positive evidence neurology.
3. EEG / neuro scans.
4. High up skull - Copper isotope exposure - separation of cranial sutures, normal skull base, presence of choroid plexus & thickening of skull bones.
5. Ultrasonography.
6. MRI scan - done by - Chiasm malformation or cerebellar or periaqueductal lesions.

Treatment

1. Medical treatment is not effective in long term treatment of chronic hydrocephalus.
2. Medications affect CSF dynamics by the following mechanisms:
 - * Drugs used to reduce raised IC tension - Mannitol (20%) 7cc/kg/dose q 8 hrly
 - * Decreasing CSF secretion - Acetazolamide = 9-30 mg/kg/d. PO tid
 - furosemide - 1mg/kg/d IV & 6 mg/kg/dose PO tid
 - * Increasing CSF reabsorption - isouridine.

Surgical / Surgical treatment is the preferred over medical treatment.

SHUNT OPERATIONS:-

Types - 1. A Ventriculoperitoneal shunt.
2. A ventricular risk shunt.

☛ Alternatives to shunting include the following:-

1. Choroid plexectomy
2. Ventriculostomy.

Prognosis:-

In untreated hydrocephalus, death may occur by tonsillar herniation secondary to raised ICP with compression of the brain stem and subsequent respiratory arrest.

Diarrhea in children

Gadade Sushma Dhanaji

DIARRHEA DEFINITION

- The normal frequency and consistency of bowel movements varies with a child's age and diet and the definition of diarrhea varies accordingly.
- **Diarrhea :**
- excessive loss of fluids & electrolytes in stool, Increase in liquidity.
- loose or watery stools, excessively frequent stools, or stools that are large in volume.
- A more exact definition is excessive daily stool liquid volume (>10 ml stool/kg body weight/day).

- **Frequency** — It is normal for young infants to have up to 3 to 10 stools per day, although this varies depending upon the child's diet (breast milk versus formula; breastfed children usually have more frequent stools). Older infants, toddlers, and children normally have one to two bowel movements per day.
- **Diarrhea** can usually be defined as an increase in stool frequency to twice the usual number per day in infants; or three or more loose or watery stools per day in older children.

- **Consistency and color** — The consistency and color of a child's stool normally changes with age, which highlights the importance of knowing what is normal for your child. Young infants, especially those who are breastfeeding, usually have soft stools. Their stools may be yellow, green, or brown, and/or appear to contain seeds or small curds.
- All children's stools can vary as a result of their diet. Development of stools that are runny, watery, or contain mucus is a significant change that should be monitored. The presence of visible blood or black stools is never normal and always requires medical attention.

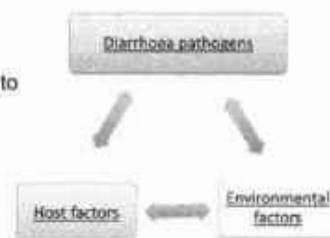

High risk groups

- ✓ Young age groups
- ✓ Immune deficient individuals
- ✓ Measles
- ✓ Malnutrition
- ✓ Travel to endemic areas
- ✓ Lack of breast feeding
- ✓ Exposure to unsanitary conditions
- ✓ Attendance to child care centers
- ✓ Poor maternal education

Causes and risk factors

- Microbial,
- Host and
- Environmental factors interact to cause GE

Diarrhea Classification

- According to Pathogens.
- According to Duration.
- According to Mechanism of Diarrhea.
- According to clinical types of Diarrhea.

DIARRHEA CAUSES

- **Infective, non-infective**
- The most common cause of acute diarrhea is a viral infection.
- Other causes include:
 - bacterial infections,
 - side effects of antibiotics, and
 - infections not related to the gastrointestinal (GI) system.
- In addition, there are many less common causes of diarrhea.

Diarrhea according to Duration

- Acute diarrhea last <14 days.
- When episode last >14 days it is called chronic or persistent diarrhea.

Mechanisms of diarrhea

- Osmotic: e.g Lactose intolerance
- Secretory: e.g Cholera
- Mixed secretory-osmotic: e.g Rotavirus
- Mucosal inflammation: e.g Invasive bacteria
- Motility disturbance

Clinical types of diarrhea

- There are 2 main clinical types of AD
- Each is a reflection of the underlying pathology and altered physiology

Clinical type	Description	Common pathogens
Acute watery diarrhea	This is the most common. It is of acute onset, commencing usually within 48 hours of acquisition. It is usually self-limiting and most vulnerable subjects within 7 days. The main complication is dehydration.	Rotavirus, Vibrio cholerae
Acute bloody diarrhea	Also referred to as dysentery. This is the concept of bloody stools. It is as a result of damage to the intestinal mucosa by an invasive organism. The complications here are sepsis, toxic megacolon, colonic perforation, haemorrhage and dehydration.	Shigella spp, Entamoeba histolytica

DIARRHEA EVALUATION

- The evaluation of diarrhea in children who do seek medical evaluation requires a careful review of:
 - Medical history, a
 - Physical examination, and
 - Diagnostic testing.
- The clinician will perform a thorough examination because there are some infections unrelated to the bowels (such as an ear infection) that can cause diarrhea.
- Many tests are available to diagnose the cause of diarrhea and to determine the severity of dehydration, although most children will not require testing.

Assessment of the child with diarrhoea

History

- Ask the mother or other caretaker about:
 - ✓ Duration of diarrhoea;
 - ✓ Presence of blood in the stool;
 - ✓ Number of watery stools per day;
 - ✓ Number of episodes of vomiting;
 - ✓ Presence of fever, cough, or other important problems (e.g. convulsions, recent measles);
 - ✓ Pre-illness feeding practices;
 - ✓ Type and amount of fluids (including breast milk) and food taken during the illness;
 - ✓ Drugs or other remedies taken;
 - ✓ Immunization history.

Clinical assessment

Physical examination:

- ✓ General appearance
- ✓ Hydration Status
- ✓ Systemic Examination
- ✓ Extra intestinal manifestations

Degree of dehydration			
Symptoms	NO DEHYDRATION (0% loss of body weight)	SOME DEHYDRATION (3-9% loss of body weight)	SEVERE DEHYDRATION (10% loss of body weight)
Neck veins	Full, soft	Normal, flat and or red, visible	Absent, visible, prominent
Teeth	Drinks normally, no or few fluids	Teeth: dry to pink	Drinks poorly, unable to drink
Heart rate	Normal	Normal to increased	Tachycardic; bradycardic in severe cases
Quality of urine	Normal	Normal to decreased	Dark, bloody, or inapparent
Respiratory	Normal	Normal, fast	Deep
Eyes	Normal	Slightly sunken	Deeply sunken
Tears	Present	Decreased	Absent
Mouth and tongue	Moist	Dry	Parched
Skin turgor	Instant recoil	Recoil in 1-2 seconds	Recoil in >2 seconds
Capillary refill	Normal	Prolonged	Prolonged, normal
Extremities	Warm	Cool	Cool, mottled, cyanotic
Urine output	Normal to decreased	Decreased	Minimal

Laboratory investigations

I) STOOL: MICROSCOPY : low sensitivity & specificity

- a) leucocyte (>10/hpf) - Invasive diarrhea
- b) RBC, ova, Trophozoite or cyst.
- c) culture & sensitive - persistent diarrhea

II) BLOOD TESTS

- a) CBC
- b) S. electrolyte
- c) BUN & creatinine

III) GUE

IV) Others: Tests for specific diagnoses should be sent when appropriate, such as serum antibody tests for celiac disease or colonoscopy for suspected UC. A trial of lactose restriction for several days is helpful to rule out lactose intolerance, or a more specific test, such as lactose breath hydrogen analysis, can be performed.

Management

- Treating dehydration is the corner stone in managing diarrhea.(Oral rehydration therapy)
- Feeding: Continue Breast feeding and routine normal diet and energy dense feeds.
- Hand washing after defecation & before meal alone can reduce 40% of water & excreta related disease
- Drug therapy has very little place
 - Antibiotic
 - Antisecretory
 - Antimotility.
- Follow-up to ensure recovery

Treatment : home therapy to prevent dehydration and malnutrition

Children with no signs of dehydration need extra fluids and salt to replace their losses of water and electrolytes due to diarrhoea. If these are not given, signs of dehydration may develop

Composition of standard and reduced osmolarity ORS solutions

	Standard ORS solution (mEq or mmol/l)	Reduced ORS solution (mEq or mmol/l)
Glucose	111	75
Sodium	90	75
Chloride	80	65
Potassium	20	20
Citrate	10	10
Osmolarity	311	245

The advantages of this new reduced osmolarity ORS solution

- It reduces stool output or stool volume by about 25% when compared to the original WHO-UNICEF ORS solution
- It reduces vomiting by almost 30%
- It reduces the need for unscheduled IV therapy by more than 30%.

Management		
home available fluids	acceptable	unacceptable
	Plain water	coffee
	coconut water	aerated cold drinks
	plain buttermilk	fruit juice(with sugar)
	milk	Lassi(with sugar)
	thin dal	
	fruit juice(without sugar)	
	Lassi(without sugar)	

warning signs
<p>Take the child to a health worker if there are warning signs of dehydration or other problems</p> <ul style="list-style-type: none"> • The child does not get better in three days. • Starts to pass many watery stools; • Has repeated vomiting; • Becomes very thirsty; lethargy, poor urine output • Is eating or drinking poorly; • Develops high fever; • Has blood in the stool;

Indications for IV therapy:
<ol style="list-style-type: none"> 1. Depressed level of consciousness. 2. Moderate dehydration when there is no improvement after the first 4 hours of treatment with ORS. 3. Severe dehydration 4. Uncontrolled vomiting, poor urine output 5. Patients unable to drink from extreme fatigue, stupor, or coma 6. Patients with Abdominal distention.

Composition of IV solutions:					
Composition of IV solutions:					
Fluid	Na ⁺	Cl ⁻	K ⁺	Ca ²⁺	Lactate
NS (0.9% NaCl)	154	154			
½ NS (0.45 NaCl)	77	77			
¼ NS (0.225% NaCl)	38.5	38.5			
Ringer lactate	130	109	4	3	28

Zinc in Diarrhea

- Zinc deficiency is common in developing countries and zinc is lost during diarrhea.
- Zinc deficiency is associated with impaired electrolyte and water absorption, decreased brush border enzyme activity and impaired cellular and humoral immunity.
- Treatment with zinc reduces the duration and severity of AD and also reduces the frequency of further episodes during the subsequent 2-3 months.
- WHO recommends that children from developing countries with diarrhea be given zinc for 10-14 days
10mg daily for children <6 months
20 mg daily for children >6 months

Probiotics in the Treatment of Diarrhea

Mechanisms:

1. Protect the intestine by competing with pathogens for attachment.
2. Strengthening tight junctions between enterocytes
3. Enhancing the mucosal immune response to pathogens.

Antibiotic in Acute Diarrhoea

Indicated only for :

- Acute bloody diarrhea with gross blood
- Severe invasive bacterial diarrhea e.g Shigella
- Cholera,
- Associated systemic infection
- Severe malnutrition.
- Giardiasis, Entamoeba histolytica
- Suspected or proven sepsis
- Immuno compromised children

Antibiotics are contraindicated in:
E. coli O157: H7 because they increase the risk of Hemolytic-Uremic syndrome (HUS)
Uncomplicated salmonella enteritis because they prolong bacteria shedding

Complications & consequences of watery diarrhea:

- Dehydration.
- electrolyte disturbance.
- Base deficit acidosis.
- Malnutrition
- Persistent diarrhea
- Toxic illness
- Renal Failure.
- Hus(hemolytic uremic syndrome)
- DIC
- Convulsion
- Cerebral damage and cerebral venous thrombosis.

Extraintestinal manifestations & complications

- Reactive arthritis :Salmonella ,shigella , Yersinia, C.difficile campylobacter.
- Guillain-Barre Syndrome: campylobacter
- Glomerulonephritis:Shigella , campylobacter ,Yersinia
- IgA nephropathy :campylobacter
- Erythema nodosum: Yersinia ,campylobacter, salmonella
- Hemolytic anemia : Yersinia ,campylobacter
- HUS(hemolytic uremic syndrome): shigella , E. coli
- Focal infections e.g:
UTI,Pneumonia,osteomyelitis,meningitis ...(parantral diarrhea).

How can we prevent diarrhoeal disease?

This involves intervention at two levels:

Primary prevention (to reduce disease transmission)

- Rotavirus and measles vaccines
- Hand washing with soap
- Providing adequate and safe drinking water
- Environmental sanitation

Secondary prevention (to reduce disease severity)

- Promote breastfeeding
- Vitamin A supplementation
- Treatment with zinc
